Interventional Neuroradiology: Present and Future. Currently, interventional neuroradiological techniques play important roles in the treatment of various neurosurgical diseases such as cerebral aneurysms, brain and spinal arteriovenous malformations and fistulas, and cerebrovascular occlusive diseases.

Interventional Neuroradiology: Present and Future ...

Consequently, about 40 to 50 percent of trainees in interventional neuroradiology are neurosurgeons. Other trainees include neurologists, vascular surgeons, and general interventional radiologists interested in doing neurological work. With all these advances and changes, it seems like an exciting time for interventional neuroradiology.

CT-Based Advances. With advances in interventional neurology procedures, such as recanalization for acute ischemic stroke, embolization for cerebral aneurysms, or brain arteriovenous malformations, it is important to be able to immediately identify complications such as intracranial bleeding.

Advances in magnetic resonance imaging. Tractography of the spinal cord is now possible on 3 Tesla systems with the development of cerebrospinal fluid motion nulling software. Images of fibre tract disorders in white matter disorders such as multiple sclerosis, tumours of the spinal cord and spinal cord trauma are now possible.

Introduction. Since that time, dramatic advances in interventional neuroradiology have been made possible by similarly rapid advances in medical technology, such as neuroimaging (particularly digital subtraction cerebral angiography and angiographic road-mapping), and development of revolutionary medical devices.

Update on Interventional Neuroradiology

Originally developed in the 1980s by radiologists and neurological surgeons, interventional neuroradiology is made possible by dramatic advances in computer technology and state-of-the-art equipment. Above: Marcel Maya, MD, co-chair of the S. Mark Taper Foundation Imaging Center, and Franklin G. Moser, MD, discuss an aneurysm.
