Rational expressions are like fractions, but instead of integers in the numerator and the denominator, you have variable expressions! Learn how to work with such expressions. Namely, simplify, add, subtract, multiply, and divide them (much like fractions!). Then, solve some equations with rational expressions in them, and analyze the behavior of rational functions.

I am especially pleased to help homeschoolers.

Understanding Algebra by James Brennan

Division Division problems will follow the same process as multiplication only with an additional step at the beginning. The first step you have to do is to find the reciprocal (or flip) the second fraction and change the problem to a multiplication problem. Once it is in the form of a multiplication problem, follow the same steps as in the previous examples.
