NJ Association for Behavior Analysis

The behavioral analysis of child development originates from John B. Watson's behaviorism. Watson studied child development, looking specifically at development through conditioning (see Little Albert experiment). He helped bring a natural science perspective to child psychology by introducing objective research methods based on observable and measurable behavior.

Quantitative Analysis of Investor Behavior. Since 1994, DALBAR's Quantitative Analysis of Investor Behavior (QAIB) has measured the effects of investor decisions to buy, sell and switch into and out of mutual funds over short and long-term timeframes. These effects are measured from the perspective of the investor and do not represent the performance of the investments themselves.
