This is commonly called a regional approach to the study of anatomy. Another approach would be the systemic approach, which takes a look at each system separately (vascular, respiratory, etc.)

Homepage for the Anatomy Lesson

The pudendal nerve is a sensory, autonomic, and motor nerve that carries signals to and from the genitals, anal area, and urethra. There are slight differences in the nerve branches for each person but typically there are three branches of the nerve on each side of the body; a rectal branch, a perineal branch and a clitoral/penile branch.

Tooth enamel is the most mineralized tissue in the body, consisting mainly of the rock-hard mineral hydroxyapatite. Hydroxyapatite is also found in some rocks and makes up part of the mineral/protein matrix of bones. Some animals have the ability to replace their teeth throughout their lifespan, as teeth may be lost due to injury or disease.

The lymphatic system parallels the cardiovascular system (see the images below). The lymphatic system is unique, in that it is a 1-way system that returns lymph fluid via vessels to the

cardiovascular system for eventual elimination of toxic byproducts by end organs, such as the kidney, liver, colon, skin, and lungs.
