point particles; it obscures certain features of dynamics so that concepts such as chaos theory took over 200 years to discover; and it's not at all clear what the relationship is between Newton's classical laws and quantum physics. The purpose of this course is to resolve these issues by

presenting new perspectives on Newton's ideas.

Classical mechanics describes the motion of macroscopic objects, from projectiles to parts of machinery, and astronomical objects, such as spacecraft, planets, stars and galaxies.. If the present state of an object is known it is possible to predict by the laws of classical mechanics how it will move in the future (determinism) and how it has moved in the past (reversibility).

This problem lends itself to the method of solution suggested in the solution of Problem 6-8. The volume of a right cylinder is given by $V = \pi R^2 H$ (1) The total surface area A of the cylinder is given by $A = A_{\text{bases}} + A_{\text{side}} = 2\pi R^2 + 2\pi RH = 2\pi R (R + H)$ (2) We wish A to be a minimum.
