Simulation Modeling And

Simulation modeling is the process of creating and analyzing a digital prototype of a physical model to predict its performance in the real world. Simulation modeling is used to help designers and engineers understand whether, under what conditions, and in which ways a part could fail and what loads it can withstand. Simulation modeling can also help to predict fluid flow and heat transfer ...

Modeling and simulation (M&S) at simple terms is a substitute for physical experimentation, in which computers are used to calculate the results of some physical phenomenon. As it is apparent from its name "Modeling and simulation" firstly a computer is used to build a mathematical model which contains all the parameters of physical model and represent physical model in virtual form then ...
