

*Laboratory Investigation Of Endocrine Disorders Second Edition*

### **Laboratory Investigation Of Endocrine Disorders**

Many tests of liver biochemistry and excretory performance are called liver function tests. However, rather than assessing liver function, several of these tests measure liver enzymes that are released into the bloodstream (eg, release of aminotransferases from injured liver cells or of alkaline phosphatase due to cholestasis).

Active ingredients in sunscreens come in two forms, mineral and chemical filters. Each uses a different mechanism for protecting skin and maintaining stability in sunlight. Each may pose hazards to human health. The most common sunscreens on the market contain chemical filters. These products typically include a combination of two to six of these active ingredients: oxybenzone, avobenzone ...

The endocrine system of the body is made up of glands that secrete hormones. The pancreas, for example, is an endocrine organ that secretes the hormone insulin. The hormone/endocrine system is one system of communication within the body. Certain cells release hormones as a result of some signal (e.g., the beta cells in the pancreas release insulin when they sense that glucose levels in the blood ...

Laboratory testing is performed in many different settings, from the large reference lab to your own home. As we learn to take a more active role in our medical care, a clear understanding of what happens when our blood or urine or other body fluid specimen is sent "off to the lab" will help us to become more knowledgeable participants in our own healthcare.
