Learn about cell-mediated immunity by investigating its function and process in the immune system. We will cover how T lymphocytes and major histocompatibility complex molecules play an important ...

Cell-mediated Immunity: Definition & Response | Study.com

But the decision not to vaccinate does not mean that parents can be careless about protecting their children from disease. While some of the illnesses we vaccinate for are extremely rare (tetanus, diphtheria), unlikely to cause harm to children (chicken pox, mumps, rubella) or not a threat to children (hepatitis B), others like measles or polio can have serious consequences in poorly nourished ...

Building Natural Immunity - Nourishing Traditions

Plant disease resistance protects plants from pathogens in two ways: by pre-formed structures and chemicals, and by infection-induced responses of the immune system. Relative to a susceptible plant, disease resistance is the reduction of pathogen growth on or in the plant (and hence a reduction of disease), while the term disease tolerance describes plants that exhibit little disease damage ...

Plant disease resistance - Wikipedia

TED Talk Subtitles and Transcript: How do vaccines prevent disease -- even among people too young to get vaccinated? It's a concept called "herd immunity," and it relies on a critical mass of people getting their shots to break the chain of infection. Health researcher Romina Libster shows how herd immunity contained a deadly outbreak of H1N1 in her hometown.

Immunodeficiency is a state in which the immune system's ability to fight infectious disease and cancer is compromised or entirely absent. Most cases of immunodeficiency are acquired

("secondary") due to extrinsic factors that affect the patient's immune system. Examples of these extrinsic factors include HIV infection, extremes of age, and environmental factors, such as nutrition.

Immunodeficiency - Wikipedia

After the discovery of phagocytosis, 135 years ago by Elie Metchnikoff, innate immunity underwent a rebirth following the discovery of the "pattern recognition receptors" awarded by the Nobel Prize in 2011. The understanding of the mechanisms that control infectious insults have been deciphered these last years, and a precise role of each of the players is now better understood.

More People Can't Pay Their Loans. A rise in loan delinquencies can be linked to excessive credit growth and the build-up of household debt — which are both warning signs of a coming recession, said David Beckwith, a senior research fellow at the Mercatus Center at George Mason University. Although a large build-up of debt can be a warning sign, it's important to remember that ...
