Table 2 shows properties of R410A and R32 in typical condensing and evaporating conditions for air-conditioning application (Tu et al., 2011). With a condensing temperature of 44 °C and an evaporating temperature of 10 °C, the latent heat of R32 is 40–50% respectively higher than that of R410A.

Abstract: A number of heavy-duty diesel engine manufacturers have developed their own electronic fuel injection systems. Examples include the Hydraulic Electronic Unit Injector (HEUI) and the Mechanically actuated Electronically Controlled (MEUI) systems by Caterpillar, and a number of systems by Cummins such as the Accumulator Pump System (CAPS), Quantum CELECT, HPI, and XPI injection systems.

### **Electronic Fuel Injection Systems for Heavy-Duty Engines**

There doesn't seem to be a comprehensive source for vacuum hose diagrams. Bentley, Haynes and others are sketchy, the parts fiche gif images are grainy and have too much detail and mainly verbal descriptions exist in the Type 2 archives and at Bus Boys. I've compiled this information from personal measurements, ETKA and other sources.

Hydraulic fracturing in the United States began in 1949. According to the Department of Energy (DOE), by 2013 at least two million oil and gas wells in the US had been hydraulically fractured, and that of new wells being drilled, up to 95% are hydraulically fractured. The output from these wells makes up 43% of the oil production and 67% of the natural gas production in the United States.

A rotating biological contactor or RBC is a biological treatment process used in the treatment of wastewater following primary treatment. The primary treatment process means protection by removal of grit and sand and coarse material through a screening process, followed by a removal process of sediment by settling. The RBC process involves allowing the wastewater to come in contact with a ...
